

# 1550 nm laser diode

Model 2 : 40 mW / DFB / Butterfly package

Recorded at 40 mW LD power with :

- Attenuation to 500 μW for frequency stability measurement
- Attenuation to 8 mW for RIN measurement

$$\text{Lorentzian Fit} = 10 * \log_{10} \left( \frac{10^4}{2 * \pi * \left( \left( \frac{\gamma}{4} \right) + \left( \frac{x-x_0}{\gamma} \right)^2 \right)} + 10^{offset} \right)$$

Self-Heterodyne Measurements with 6 km delay fiber

## Lorentzian Fit
